The proposed action is to issue a new State/NPDES permit for a new facility. This is a medical facility, which may discharge 30-60 gallons per minute of non-contact cooling water. The cooling water is used

to keep MRI equipment cool, if the central plant should fail or is taken off-line for maintenance. The proposed permit contains generic language to protect the waters of the state. While this discharge would be new, an Anti-degradation study will not be required, since a discharge would only occur as a backup and would normally go to the city sanitary sewer.
